

*a'*  
an anti-torsion device coupled to said moveable assembly, said anti-torsion device preventing a cable located within said moveable assembly from being rendered inoperable.

Please add the following new claims:

*a2*  
189. A TV display device comprising:  
a flat panel display having an input for receiving display data;  
a moveable assembly coupled to said display, said moveable assembly having a cross-sectional area which is substantially less than a cross-sectional area of a display structure of said flat panel display; and  
a moveable base coupled with said moveable assembly to support positioning of said moveable assembly and said flat panel display.

190. The TV display device of claim 189 wherein said moveable base comprises circuitry for providing said display data.

191. The TV display device of claim 189 wherein said moveable base acts as a counterweight relative to said moveable assembly and to said flat panel display.

192. The TV display device of claim 189 wherein one of a cable to provide display data, a tension device, and an anti-torsion device is located within said moveable assembly.

193. The TV display device of claim 189 further comprising a counter balancing spring assembly coupled to said moveable assembly.

194. A TV display device as in claim 193 wherein a first end of said moveable assembly is coupled to said moveable base at a rotatable base assembly and wherein said counter balancing spring assembly is coupled to said moveable base and to said flat panel display.

195. A TV display device as in claim 189 wherein said TV display device is moveable by one person unaided by any assistance.

196. A TV display device as in claim 189 wherein said moveable assembly provides at least three degrees of freedom of movement for said flat panel display device.

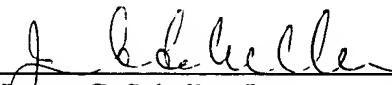

REMARK

The foregoing amendments are supported by the original specification and do not add new subject matter. These amendments should be entered and considered

Respectfully submitted,

BLAKELY, SOKOLOFF, TAYLOR & ZAFMAN LLP
